OBJECTIVE

Computer Science undergraduate and aspiring AI/ML Engineer with a strong foundation in Machine Learning, Deep Learning, Natural Language Processing, Generative AI, and statistical analysis. Proficient in Python and experienced in applying data-driven methodologies to model development, data analysis, and intelligent application development. Seeking opportunities to leverage AI/ML expertise, analytical problem-solving, and emerging technologies to develop innovative and impactful solutions.

EDUCATION

Silicon University — Bhubaneswar, Odisha
Bachelor of Technology in Computer Science and Engineering | CGPA: 9.94/10 — Aug 2023 – Jun 2027

Shree Krishna International School — Bhubaneswar,Odisha
Senior Secondary (Class XII) | Percentage: 85.2% — 2022

ODM Public School — Bhubaneswar, Odisha
Secondary (Class X) | Percentage: 98.4% — 2020

WORK EXPERIENCE

GENERATIVE AI / RAG INTERN — Jun 2026 – Jul 2026
Syllogistek Systems Private Ltd. | Remote

- Built foundations across 2 core areas—Deep Learning and NLP—covering neural networks, RNNs, autoencoders, GANs, Transformers, embeddings, and BERT.
- Worked with LLMs and Retrieval-Augmented Generation (RAG), covering 4 key pipeline stages: embeddings, document processing, retrieval, and context augmentation.
- Applied prompt engineering, instruction following, and LLM fine-tuning techniques across Generative AI application workflows.

MACHINE LEARNING INTERN — Jun 2025 – Jul 2025
Syllogistek Systems Private Ltd. | Remote

- Developed end-to-end machine learning workflows covering EDA, data preprocessing, outlier detection, feature engineering, and dimensionality reduction across multiple ML tasks.
- Built and tuned 6 classification models using Scikit-learn and XGBoost with GridSearchCV and reproducible ML pipelines.
- Evaluated model performance using 4 key metrics—Accuracy, Precision, Recall, and F1-score—along with feature importance and model interpretability techniques for model selection.

PROJECTS

US Traffic Accident Analysis | Python, Pandas, Scikit-learn, Seaborn, Matplotlib

- Performed Exploratory Data Analysis (EDA) on a 386K-row sample of a nationwide 7.7M-record dataset spanning 49 states to identify accident trends and high-risk regions.
- Performed feature engineering through missing-value imputation, VIF-based multicollinearity reduction, and PCA; applied hybrid outlier detection techniques to improve data quality.
- Applied K-Means, DBSCAN, and GMM clustering and evaluated cluster quality using Silhouette scores, identifying a dominant accident-condition cluster covering 85% of records.
- Analyzed and visualized accident severity, weather impact, and temporal/spatial patterns to derive actionable transportation-safety insights.

Obesity Risk Classification | Python, Scikit-learn, XGBoost

- Developed a multiclass machine learning pipeline on 2,100+ records to predict obesity risk, incorporating DBSCAN/Isolation Forest for outlier detection and PCA/t-SNE/LDA for dimensionality reduction.
- Optimized 6 classification models using GridSearchCV; XGBoost achieved 97.8% accuracy and a 0.977 macro F1-score, outperforming Random Forest and SVM.

TECHNICAL SKILLS

Programming: Python, SQL
Machine Learning: Scikit-learn, XGBoost, Supervised Learning, Unsupervised Learning, Model Tuning, Model Evaluation, Feature Engineering, Scikit-learn Pipelines
Data Science: Pandas, NumPy, PCA, Feature Selection, Statistical Analysis, Data Preprocessing
Deep Learning & Generative AI: TensorFlow, PyTorch, Neural Networks, NLP, Transformers, BERT, LLMs, RAG, Prompt Engineering
